13-1 Changing the Living World Humans use selective breeding, which takes advantage of naturally occurring genetic variation in plants, animals, and other organisms, to pass desired traits to the next generation of organisms. Selective breeding allows only those organisms with desired characteristics to produce the next generation.

Chapter 13: Genetic Technology - tvusd.k12.ca.us

A very common type of genetic engineering involves inserting DNA from one organism into another. An example is the insertion of a human gene into a circular DNA plasmid from a bacterium. Then that engineered plasmid is taken in by another bacterium and the product of the human gene is generated in large quantities.
