Explores the principle that heat transfer rests on, but goes beyond, thermodynamics. The discussion of every problem in the text begins with the interpretation of the First Law for control volume, in terms of an appropriate control volume or system. The material presented within the text is more than can be covered within a one-semester class.

Thermal conduction. In contrast, in heat transfer by thermal radiation, the transfer is often between bodies, which may be separated spatially. Also possible is transfer of heat by a combination of conduction and thermal radiation. In convection, internal energy is carried between bodies by a moving material carrier.
