The main purpose in this very ambitious project is to learn using Green's theorem at the interface of vector calculus, differential equations and control. Unlike many other projects that tie the integral theorems of vector calculus to either one of the traditional, but narrow applications of electro magnetism or fluid dynamics, this project takes a much broader view.

The "calculus" way For the curving incline, on the other hand, things are constantly changing . The steepness of the incline is changing — and not just in increments like it's one steepness for the first 10 feet then a different steepness for the next 10 feet — it's constantly changing . And the man pushes with a constantly changing
