Fatigue Analysis for Coiled Tubing, FACT version 1.xx, is the latest of the coiled tubing fatigue module produced by MEDCO. This program performs fatigue analysis and tri-axial stress computations of coiled tubing in real time, in post-job mode, and/or using manual data entry.

amount of manual equipment handling. The injector head is transported with the connector installed. A self-folding gooseneck and partially automated process for stabbing coiled tubing into the injector head limits personnel exposure to hazards. To simplify hookups and pressure testing, the improved skid designs have fewer valves and

Coiled tubing is a continuous length of steel pipe, spooled onto a large diameter reel. The pipe comes in a variety of sizes and can be run into any well. Coiled tubing is commonly used to convey tools, and circulate liquids and gases into and out of the wellbore without relieving the wellbore pressure.

The reeled drillstring system repeatedly used a bottomhole mud percussor and an oscillator (at different times) to drive the bit. In 1935, a total of 4,000 ft of borehole was drilled with this system, with a maximum single borehole depth of 2,000 ft. The Bannister reelable drillpipe system reportedly became inactive in or about 1940 because of the lack of suitable downhole motors available.

Coiled tubing is a continuous string of tubing, rolled onto a spool. It is made from rolling strip material into a tubular form and resistance welding along its length. Coiled-Tubing (CT) continues to grow as an enabling technology that provides cost economy and time efficiency for the oil and gas industry.

Coiled Tubing Operations. Coiled tubing is chosen over conventional straight tubing because conventional tubing has to be screwed together. Additionally, coiled tubing does not require a workover rig. Because coiled tubing is inserted into the well while production is ongoing, it is also a cost-effective choice and can be used on high-pressure ...
