Congestive heart failure (CHF) occurs when the myocardium can not pump effectively enough to meet the body's needs. Heart failure usually occurs in the damaged left ventricle, however, it may also occur in the right ventricle. In any event, damage to the left ventricle usually occurs first. Anna C ...

Congestive Heart Failure (CHF) - Nursing Care Plan ...

Heart failure (HF) or Congestive Heart Failure (CHF) is a physiologic state in which the heart cannot pump enough blood to meet the metabolic needs of the body. Heart failure results from changes in the systolic or diastolic function of the left ventricle. The heart fails when, because of intrinsic ...

16+ Heart Failure Nursing Care Plans - Nurseslabs

Congestive heart failure (CHF) otherwise known as cardiac failure refers as the inability of the heart to pump sufficient blood to meet needs of tissues for oxygenation and nutrition. This disease can affect the heart's ability to respond to circulation demands of the body. CHF is a slowly developing condition where cardiac output is lower-than-normal.

Pathophysiology of Congestive Heart Failure to meet the demands of the various organ systems. Although this concept persists in some circles and is generally correct, we now know that the syndrome of heart failure is far more complex. Heart failure is now more broadly defined as a clinical syndrome characterized by dyspnea

Pathophysiology of Congestive Heart Failure

Heart failure-Definition. Heart failure is a syndrome in which structural or functional cardiac conditions impair heart's ability to supply sufficient blood flow in order to meet the body's needs, or to do that at an elevated diastolic pressure[.]. There are many definitions of this complex syndrome, but none is satisfactory, due to the lack of a universally agreed definition and challenges ...
