Toyota do have issues with the 2lt heads and this shows but this is due to the lack of maintenance while in Japan or even when they come out here not being maintained. The 3Y is not a performance engine and a Supra engine (5m or 7m) will give more power and higher rev's for the same economy but you are comparing carb to EFI.

The use of "G" to denote twin cam engines was decided on in 1971, with the renaming of the 10R into 8R-G. Before, twin cams had received new numerical codes. Note: Toyota, in 1987, began assigning dual letter engine codes to some of the "engine family" categories in some engine lines, particularly six cylinder models. This can create potential ...

The best thing you can do for a 2LT (or 2LT-2) is put on a larger exhaust and ditch the restrictive cast elbow. 3" mandrel bends and tubing are common at big rig parts houses, and you can make your own 3" mandrel system for less than a muffler shop would charge for a regular system. It definately pulls harder than the 22RE I had before.

You'd have to double-check that. Regardless of which diesel you use - I think you are asking for problems - especially if you want to run 12 PSI boost along with an intercooler. Too little of an engine and too much load. A 2LT barely makes the power of a 20R gas engine and makes a lot less then a 22RE gas engine.

What is clear to me is that you shouldn't check the oil level immediately after turning off the engine. I assume that there may be two differences in these methods. For example, the engine and the oil may have different coefficients of thermal expansion. Also, checking the oil level when the engine is cold gives the oil more time to settle.
