Carburetor adjustment. Piston wash is the color and amount of carbon buildup on the top (dome) of the piston. Lean engines will have a piston dome covered in black carbon, and rich engines will have a clean piston dome that appears new and free of carbon buildup. This is often the opposite of intuition.

**Carburetor - Wikipedia**

Carbureted Engines. By using the venturi effect, where air speeds up in the manifold due to a narrowing of the chamber, fuel is vaporized and mixed with air prior to entering the engine. The volume of air flowing through the induction system is the primary means of fuel metering. The throttle controls how much air goes into the engine,...

**The Pros And Cons Of Carbureted vs. Fuel Injected Engines ...**

The goal of a carburetor is to mix just the right amount of gasoline with air so that the engine runs properly. If there is not enough fuel mixed with the air, the engine "runs lean" and either will not run or potentially damages the engine.

**Carburetor Rebuild | Briggs & Stratton**

Short answer - no - diesel is too viscous to properly vaporise in a carburettor at normal temperatures, and even if it would, it's a very bad idea to have combustible mixture in the cylinder during compression on a diesel engine. Slightly longer answer - as has been said already it is possible to build a dual - fuel engine.
