**Carbon Cycle Concept Map Answers - caffetorelli.com**

A model that shows the loss of energy from one trophic level to another.They're also known as ecological pyramids. Ecology the process in witch nitrogen gas is converted into compounds that contain nitrate or ammonium Carbon Cycle The process in witch carbon is cycled between its

**Biology concept map! by Vaughn Hanson on Prezi**

Carbon cycle in biology, the exchange of carbon between living organisms and the nonliving environment. Inorganic carbon dioxide in the atmosphere is converted by plants into simple carbohydrates, which are then used to produce more complex substances. Animals eat the plants and are then eaten by other animals.

### **Carbon cycle - Credo Reference**

Carbon has been locked up in fossil fuels, built up from once-living things, for millions of years. Acknowledgement: Public domain. Sediments and sedimentary rock 1,000,000,000 billion tonnes of carbon. The carbon cycle overlaps the rock cycle. Ocean sediments and the rocks they turn into contain huge amounts of carbon.

### **Carbon cycle — Science Learning Hub**

Best Answer: light reactions -The steps in photosynthesis that occur on the thylakoid membranes of the chloroplast and that convert solar energy to the chemical energy of ATP and NADPH, evolving oxygen in the process. Calvin cycle The second of two major stages in photosynthesis (following the light reactions), involving atmospheric CO<sub>2</sub> fixation and reduction of the fixed carbon into carbohydrate.

components of the carbon cycle. Independent Activities: Students will work in pairs completing the carbon cycle. Assessment: Student's ability to work in teams as well as use the materials provided to understand the different parts of the carbon cycle. Follow-up This short lesson plan provides students with a preliminary

### **Title: THE CARBON CYCLE - Brooklyn College**

Abstract. Recent projections of climatic change have focused a great deal of scientific and public attention on patterns of carbon (C) cycling as well as its controls, particularly the factors that determine whether an ecosystem is a net source or sink of atmospheric carbon dioxide (CO<sub>2</sub>). Net ecosystem production (NEP), a central concept in C-cycling research, has been used by scientists to
