Engine oil is the lifeblood of the engine. The oil resides in the oil pan, which is under the car attached to the bottom of the engine. All internal (moving) parts of the engine need to be lubricated by the engine oil. Inadequate lubrication will cause the parts to wear out faster and eventually lead to engine failure. An oil filter keeps the ...

Oil Change Process 1. Drive the car around for a little while to warm up the oil. You can change the oil when it's cold, but I like to think that if the oil is warm when you change it, all of the particles (dirt, metal shavings, etc.) are still in suspension and are more likely to drain out with the old oil.
