Conceptual Design Of Chemical Processes

Process Design is the "capstone" course in the chemical engineering curriculum. It used to be divided into Equipment Design and Plant Design. With the publication of Rudd and Watson's "Process Engineering Strategy" in 1968, it was recognized that it's principles can be taught and not "just has to be learned later" by a chemical engineer in his career.

Conceptual design of chemical processes. It uses a case study approach, guiding readers through realistic design problems, and referring back to these cases at the end of each chapter. Throughout, the author uses shortcut techniques that allow engineers to obtain the whole focus for a design in a very short period (generally less than two days).

Conceptual design of chemical processes / James M ... - Trove

The main task in conceptual process design is to develop the best process flow sheet and to find an optimal operating point. To facilitate this, this course presents a hierarchical strategy in which the overall functionality of the process is detailed in a stepwise fashion in order to design alternative flow sheets.
